Microsoft Dynamics

Microsoft Dynamics SL 2011 Web Apps

- Take control of your project time entry and travel-related expenses
- View and approve project related items
- Review Project financial information and more

Now available for your phone, tablet or desktop

Take it with you… with Microsoft Dynamics SL Web Apps

Time, Expense and Approvals are just the beginning…

Microsoft Dynamics SL is initially releasing a series of Microsoft Dynamics SL Project Web Apps. The first releases are focused on Project time entry, expense entry, associated approvals and project analysis information. This will be followed by additional project approval, review and setup features. These new Web Apps are built to work on smartphones and tablets as well as desktops.

Track project labor and expenses effectively

By using the new Web Apps, employees can record time and travel related expenses virtually anytime, anywhere. Managers can view and track labor and other expenses through the project analyst with a fully integrated solution that allows you to include labor costs in project profitability calculations.

Provide operational efficiency

Streamline the collection of labor and project expenses with timecards and expense reports that can be entered remotely via smartphone, tablet or desktop, fully validated, and available for online project manager approval.

Connect to payroll

Project timecards can automatically integrate to payroll with Microsoft Dynamics SL financial management modules.

Microsoft Dynamics

Microsoft Dynamics SL Web Apps

On the go... That's life today. You need a project solution that travels with you and not just on your desktop, but on your smartphone or tablet. That's why we are pleased to announce the new Microsoft Dynamics SL Web Apps.

Microsoft Dynamics SL is initially taking the top features needed by project managers and employees and putting them where you can use them, in the palm of your hands. The focus is to make tasks, like entering your time or expenses just as accessible as using your phone or tablet.

Microsoft Dynamics SL is delivering these features through an HTML5 solution that is accessible via the web and will support web browsers on the following platforms and tablets.[1]

Schedule Devices/Platforms

- Microsoft Windows Phone 7.5-8
- Microsoft Surface Tablet RT/Pro
- Android 4.0
- iOS release 6 & 7

Scheduled to release in 2014

- Microsoft Dynamics SL Project Time Entry[1]
- Microsoft Dynamics SL Project Expense Entry [1]
- Microsoft Dynamics SL Project Time & Expense Approvals[1]
- Microsoft Dynamics SL Project Analyst[1]

- Project Maximums Maintenance[1]
- Percent Complete and Revenue Recognition Setup[1]
- Address Maintenance[1]
- Contract Value and Revenue Information[1]
- Budget Maintenance and Inquiry[1]
- Budget Revision Maintenance, Approval, Inquiry, and Analysis[1]
- Item Request Entry & Approval[1]
- Resource Management dashboard[1]

Microsoft Dynamics

Benefits

Intuitive User Interface
Empower employees with timecards and expense reports that are intuitive and easy-to-use. All this directly from their smartphone, tablet or desktop web browser[1]. User interfaces are built to scale to the size of device being used.
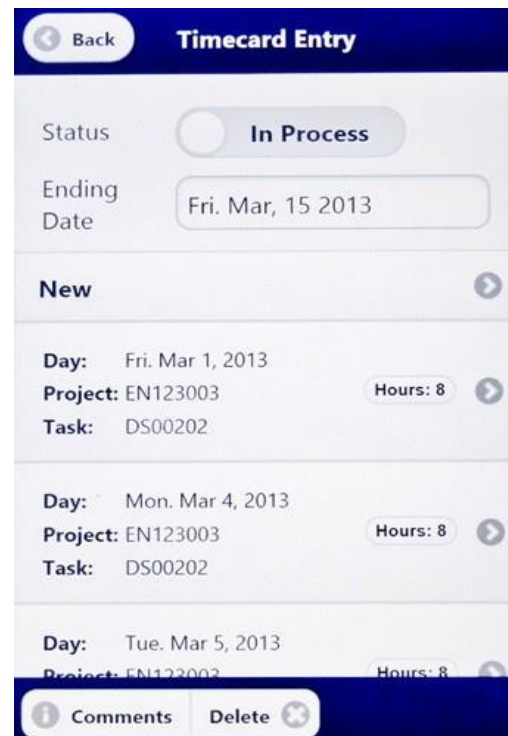

Online Timecard Reporting
Enable employees to record their time on a daily basis using electronic timecards. Labor information flows directly from employees to the project and accounting tools, and is fully validated at the time of entry to prevent time entry errors such as charges to closed projects or tasks.

Online Expense Reporting and Validation
Help ensure that travel and other employee-related project expenses are properly recorded through the convenience of real-time data entry. Online travel and expense collection minimizes paperwork, shortens the approval process, and provides managers with a clear view of expenses. Expense entry supports the attachment of files, so receipts captured on a smartphone or tablet can be attached at point of entry.

Online Timecard and Expense Review
Automatically route online timecards and expense reports to managers. Once approved, timecards and expense entries update projects, general ledger, and other integrated Microsoft Dynamics SL modules.

Microsoft Dynamics

Flexible Labor Classifications

Accommodate government, construction, and other complex project and billing requirements with flexible labor costing methods and labor classifications. Labor can also be costed and manually adjusted at the point of entry.

Complete Integration

Save time and help ensure that your data is accurate by sharing information across Microsoft Dynamics SL modules, including payroll, distribution, and field service management, to provide a single-point of data entry.

Timecard/Expense Report Auditing

Capture and store a complete audit trail of all changes to timecards and expense reports, including change reasons.

Multi-currency Expense

Gain more control of your projects with the ability to schedule billings and to report expenses in multiple currencies.

Just the beginning

Microsoft Dynamics SL Web Apps project features are just the beginning. The initial focus is to provide project managers and project employee's remote access to the features they need. Microsoft Dynamics SL will continue to expand web app development across the product.
