Frequent releases

Each new release provides the opportunity for the Microsoft Dynamics SL team to add new customer requested features and introduce the Dynamics SL community to Microsoft technologies that can impact the way they do business.

Meeting the feature requests of the Microsoft Dynamics SL customer base and introducing them to new Microsoft technologies is the primary goal/ focus of each new release.

To successfully meet this need, the Microsoft Dynamics SL team uses an agile methodology which helps deliver new releases on a more frequent basis.

Roughly every four to six months an update will be released to adds new features. These new frequent releases are built so existing users can upgrade to the latest update by installing over their current installation and do not require a full uninstall and reinstall.

This brochure shares some of the current and upcoming features for Microsoft Dynamics SL 2018.
Bringing two worlds together

Enhanced Query & Preview
Reporting options to access Dynamics SL data provide insight and preparedness. Reporting enhancements continue to be expanded.

Static reporting and querying are brought together to provide interactivity to the end user. Being able to query the data and view the potential output prior to releasing batches will be added to modules in Dynamics SL, based on the popular AR Invoice Preview screen.

Quick queries provide an interactive view into your Microsoft Dynamics SL data. Additional quick queries will be added that are accessible remotely through Web Apps or in the standard SL screen or rich client.

Approvals
Companies require separation of duties, which is widely covered by existing security features. To expand on this need, a new approval processes will expand this ability by requiring data entry to be approved prior to processing. For example, payable vouchers can be entered, but not released until they have been approved.

The approval processes will be added to key areas of Microsoft Dynamics SL. Users will be prompted for approval when needed.
Microsoft Dynamics SL Web Apps

Microsoft Dynamics SL Web Apps provide browser-based access to view and enter data through a tablet, smartphone or desktop machine. Microsoft Dynamics SL Web Apps for Microsoft Dynamics SL 2018 adds new features and functionality.

Web Apps provide remote access for Project, Time and Expense, Resource Planning, Requisitions, Financials, Reporting and Quick Query.

New Web Apps
Three new Web applications have been created for Microsoft Dynamics SL 2018:

- Timesheet Status
- Project Change Order
- Project Charge Entry

Enhancements, influenced by customers like you, continue to be added to Web Apps. Web App updates are typically released monthly.
Enhancing the core application and platform

Optimized Financials
Microsoft Dynamics SL continues to enhance the core financial solution. General Ledger, Accounts Receivable and Accounts Payable features are being streamlined to optimize data entry and reporting. Initial items include asks to enhance Voiding Checks & Vouchering, along with the removal of the need for zero check processing.

Project
Microsoft Dynamics SL continues to expand on the breadth and depth of its project solution. New time-related enhancements assist with time entry week definitions, adding enhanced abilities to enforce project-related end dates, Invoice Preview and Print enhancements, new ways to view invoices prior to approval, as well as expanded remote access through Web Apps.

Enhancements to systemwide features, distribution and service series are also under consideration.
One Microsoft

Power Suite Integration

Power BI
Power BI is a suite of business analytics tools that deliver insights throughout your organization. Connect to hundreds of data sources, simplify data prep, and drive ad hoc analysis. Produce beautiful reports, then publish them for your organization to consume on the web and across mobile devices. Everyone can create personalized dashboards with a unique, 360-degree view of their business.

SL Power BI Content Pack
The initial Dynamics SL Power BI Project content pack comes with instructions on how to connect and build reports using your SL Project data. Three Power BI dashboards, connected to Dynamics SL project data, are available.

OData Services
OData Services provide a way to deliver a consistent connection to Microsoft Dynamics SL data. These will be used to create installable packages to deliver Power BI reports to Dynamics SL customers.
Microsoft Dynamics SL

Immediately gain access to your Dynamics SL data

Getting insights into your Microsoft Dynamics SL data is easy with Power BI and Microsoft Dynamics SL. Power BI can retrieve your Project, Financial, Sales, Purchasing and Inventory data.
